#### **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1-26, drawn to a composition, classified in class 510, subclass
     201.
- II. Claims 27-32, drawn to a method, classified in class 134, subclass 3.

  The inventions are distinct, each from the other because of the following reasons:
- 2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used to remove paint from cars or photo resist.
- 3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
- 4. During a telephone conversation with Holiday Heine on June 15, 2005 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-26. Affirmation of this election must be made by applicant in replying to this Office action. Claims 27-32 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

# Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marquis et al (6,586,380).

Marquis et al disclose a paint removing composition comprising 10 to 90% by weight of an alkylene carbonate; 10-90% by weight of an alcohol and 0.1 to 25% by weight of water (col. 3, lines 50-59). Marquis et al include additional component such as glycol ethers, cellulose thickeners, chelating agents such as EDTA and propylene glycols (col. 4, lines 5-55). Marquis et al further include dicarboxylic acids such as succinic and additional alcohols such as acetone (col. 5, lines 7-63). Moreover, Marquis teach that said composition may be applied by brushing (col. 6, lines 20-41).

Marquis et al disclose all of the instantly required, however, Marquis et al is silent with respect to the pH of the composition.

It would have been obvious to one of ordinary skill in the art to combine the component to comprise a pH in the rage of 2 to 6.5 because Marquis et al teach each of the components for the purpose of producing a paint removing composition and one skilled in the art would have been able to modify the composition to produce and acidic composition to further increase the effectiveness of said paint removing compositions.
